PROFESSIONAL SUMMARY

Software Engineering graduate from NSBM Green University (affiliated with the University of Plymouth, UK), specializing in Full-Stack Web Development. Experienced in building scalable, high-performance web applications using Node.js, Next.js, MongoDB, React, and Tailwind CSS. Strong focus on clean architecture, system design, API-driven development, and enterprise-grade security practices.

TECHNICAL SKILLS

- **Frontend Development:** React.js, Next.js, Flutter, Tailwind CSS, Responsive Design, Component-Based UI
- **Backend Development:** Node.js, Express.js, RESTful API Design
- **Databases & Cloud:** MongoDB, MongoDB Atlas, MySQL, Firebase
- **Programming Languages:** JavaScript, TypeScript, Java, Python
- **Tools & Platforms:** Git, GitHub, Postman,
- **Software Engineering Practices:** Agile Development, SDLC, System Design, JWT Authentication, RBAC, Requirements Analysis, Unit Testing

EDUCATION

BSc (Hons) Software Engineering – Second Class Honours (Lower Division)

NSBM Green University (Affiliated with the University of Plymouth, UK) | Completed: December 2025

- Key Focus Areas: Full-Stack Development, Web Technologies, Software Engineering Principles

PROJECTS

Secure Task Management System – Next.js / Express / MySQL

2026

- **Technologies:** Next.js (TypeScript), Express.js (TypeScript), MySQL, Prisma, JWT, Tailwind CSS
- Built a secure, enterprise-grade task management system featuring JWT-based authentication, role-based access control (Admin/User), full CRUD task operations, and automatic overdue detection.
- Implemented a complete audit logging mechanism that tracks every task action (CREATE, UPDATE, DELETE, STATUS_CHANGE) with user identity and timestamp, ensuring full accountability and traceability.
- Designed a relational database schema with Users, Tasks, and Audit Logs tables using Prisma ORM over MySQL, with advanced filtering and search by status, title, and date.
- Demonstrated TypeScript proficiency across both frontend and backend layers, with a focus on maintainability, input validation, and scalable architecture.
- **GitHub:** github.com/SadeepJayashanka/task-management-system

Final Year Project: Emergency Hospital Admission Management System

2024–2025

- **Technologies:** Flutter, Firebase, Google Maps API
- Designed and developed a mobile-based system to reduce emergency hospital admission time, focusing on road accidents and critical patients.
- Implemented a digital admission workflow replacing manual processes, improving response time and data accuracy across patients, hospital staff, and administrators.
- Developed key features including patient pre-registration, emergency alerts, hospital-side admission handling, and real-time location tracking via Google Maps API.
- Completed under an SDLC-based approach with full documentation, requirements analysis, system design, and evaluation.
- **GitHub:** github.com/SadeepJayashanka/patient_mobile_app

Library Management System – MERN Stack

2024–2025

- **Technologies:** React.js, Node.js, Express.js, MongoDB, Tailwind CSS
- Built a full-stack library management system with secure authentication, role-based access control, CRUD operations, and RESTful APIs for borrowing/return workflows, search, and filtering.
- Developed a responsive frontend using React with Redux and Tailwind CSS, integrating MongoDB Atlas for cloud storage and performing API testing with Postman.
- Applied software engineering principles include system design, API integration, and end-to-end project deployment using Git for version control.
- **GitHub:** github.com/Plymouth-University/coursework-group_35

SOFT SKILLS

- Analytical Thinking & Problem Solving
- Teamwork & Effective Communication
- Adaptability & Continuous Learning
- Time Management & Prioritization
